***Reasons For Allowance***

1. The following is a statement of reasons for the indication of allowable subject matter:

The claims in the instant application have not been rejected using prior art because no references, or reasonable combination thereof, could be found which disclose or suggest a first and second independently movable actuator adjust the relative positions of an inner shaft and an outer sheath, where each of the first and second actuators provide a different amount of mechanical advantage between an input to one of the first and second actuators by a physician and a resulting relative position of the inner shaft and the outer sheath respectively, where a locking member that releasably holds the outer sheath relative to the inner shaft in an initial configuration, thereby holding the outer sheath in the initial configuration and tending to resist inadvertently uncovering the medical device, *in combination with the rest of the claimed limitations as set forth in claim 1*. As to claim 14, the prior art does not teach the invention including, inter alia, first and second independent means for moving a second shaft member with respect to a first shaft member, the first means being adapted for precise and sensitive adjustment of the position of the second shaft member, and the second means being adapted for rapid and large scale movement of the second shaft member, and where a locking member that releasably holds the first and second shafts in a constant initial relative position, *in combination with the rest of the claimed limitations as set forth in claim 14*. As to claim 15, the prior art does not teach the invention including, inter alia, a hub assembly affixed to a proximal end of an outer shaft member, where the hub assembly has a grasping knob and a threaded drive member, where a rotatable actuator has a bearing surface and being mounted about the threaded drive member in threaded engagement, such that rotation of the actuator in a selected direction about the threaded

drive member causes the rotatable actuator to press on the bearing surface, thereby pulling in a proximal direction the threaded drive member, hub and outer shaft member, and whereby the position of the outer shaft member relative to the inner shaft member which is adjusted by the rotatable actuator in a precise and sensitive manner, while movement of the grasping knob causes rapid and large scale movement of the outer shaft member relative to the inner shaft member and a locking member releasable holds the inner and outer shafts in a constant initial relative position, *in combination with the rest of the claimed limitations as set forth in claim 15.*

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Victor X. Nguyen whose telephone number is (571) 272-4699. The examiner can normally be reached on M-F (8-4.30 P.M).
